

OICA: True cyclic DG → Ground-truth condensation → Estimated coarsening
(Tarjan's SCC is a core step of the ALGORITHM — run on the ICA-estimated support graph)

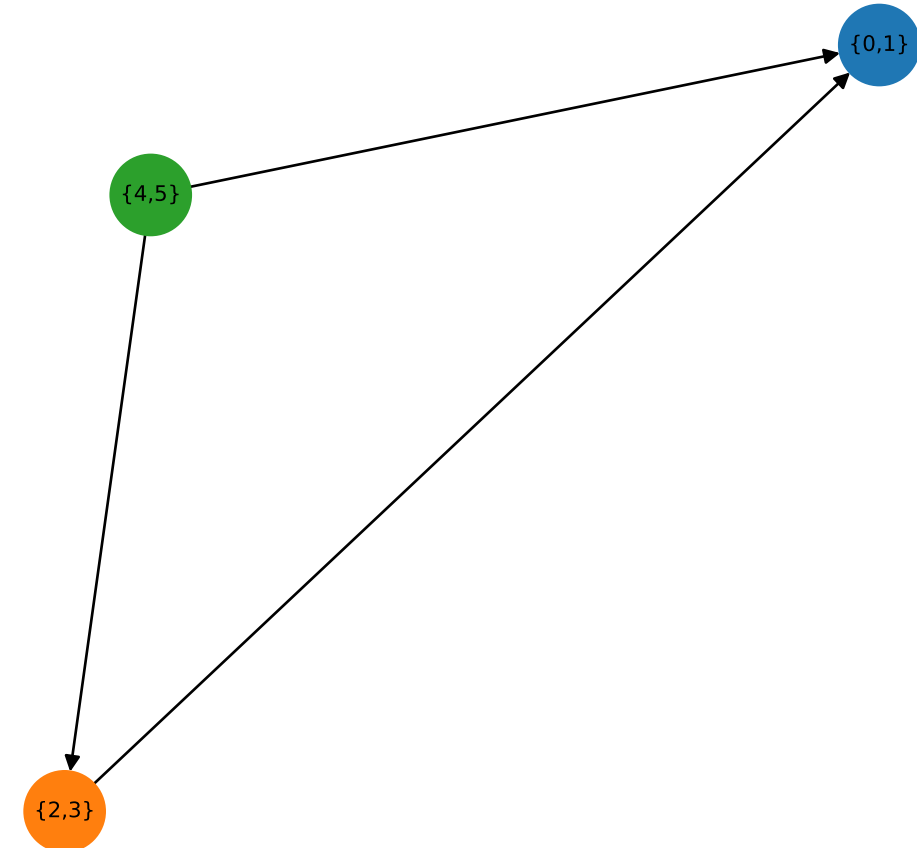

True DG — n=6 (3 SCCs of size 2)
3 non-trivial SCCs

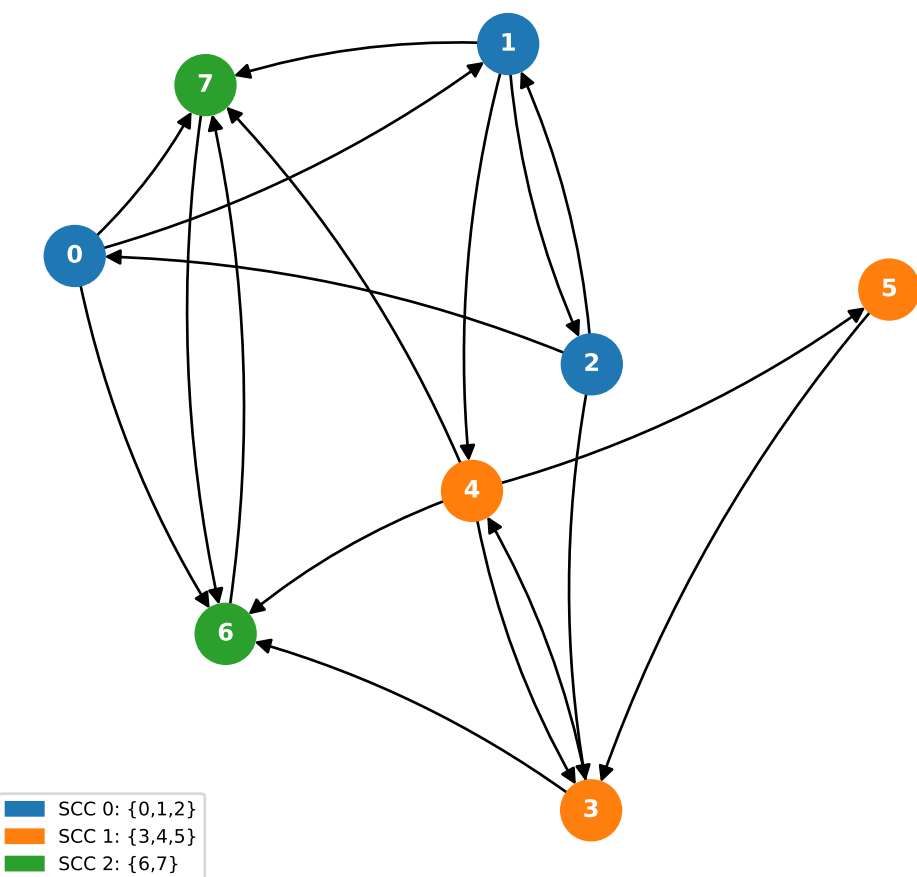

True condensation (ground truth)
[Tarjan's on true graph → 3 blocks]

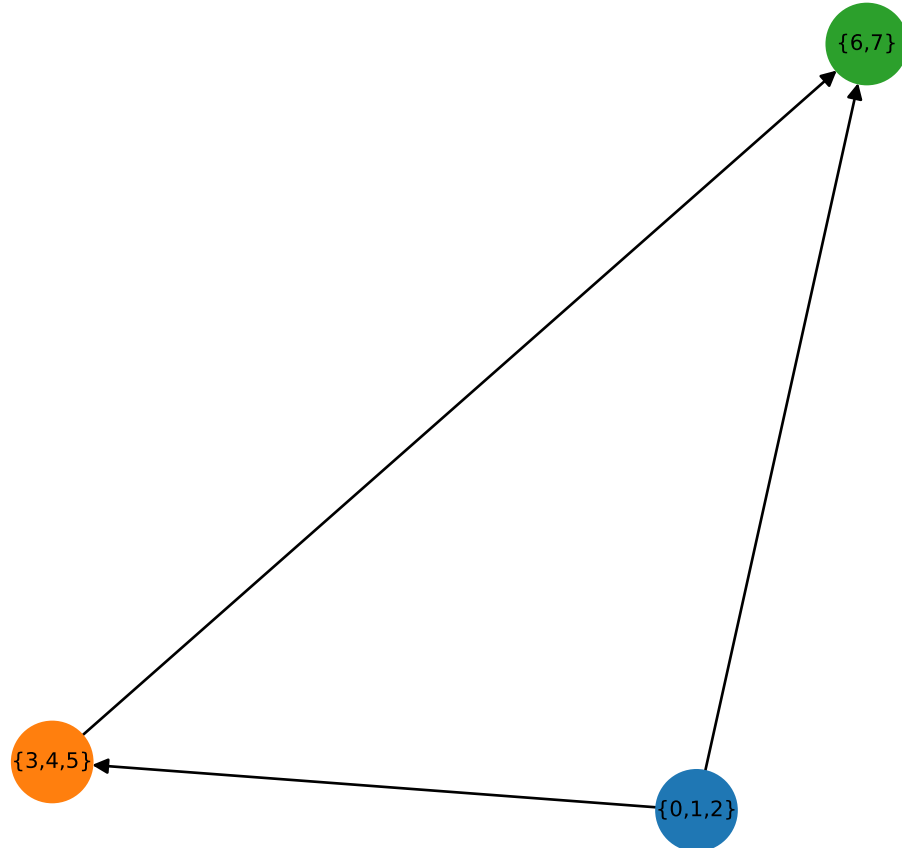

OICA estimate (3,000 obs. samples)
[Tarjan's on ICA support → 3 blocks found]

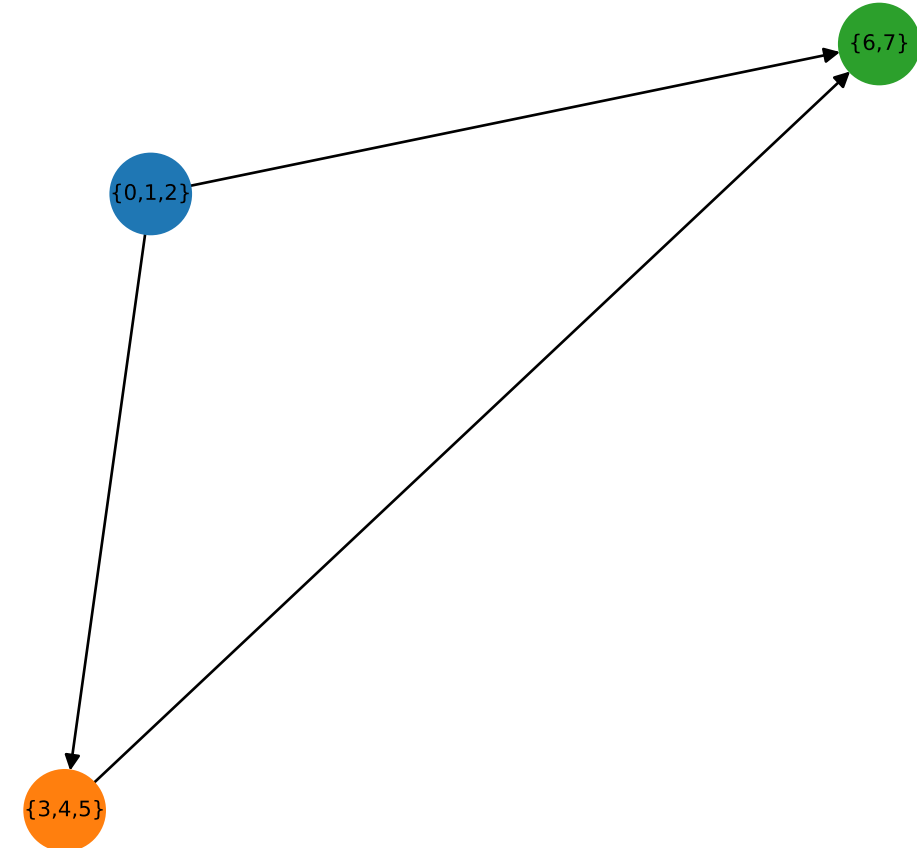

True DG — n=8 (2 SCCs of size 3, 1 of size 2)
3 non-trivial SCCs

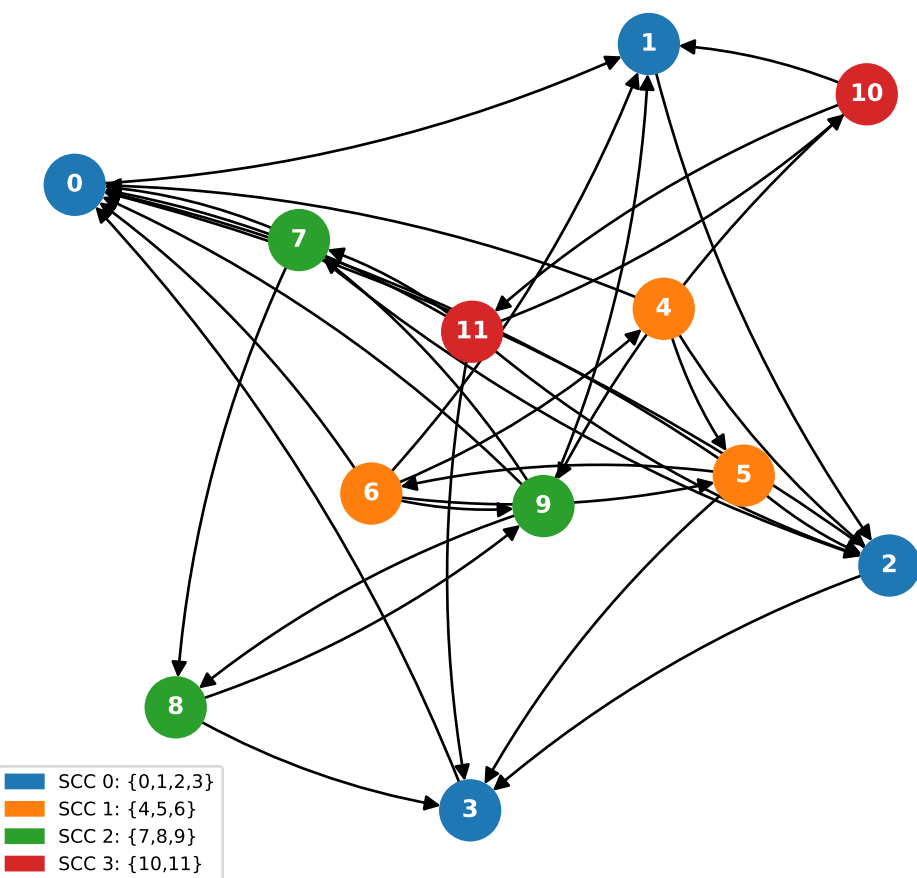

True condensation (ground truth)
[Tarjan's on true graph → 3 blocks]

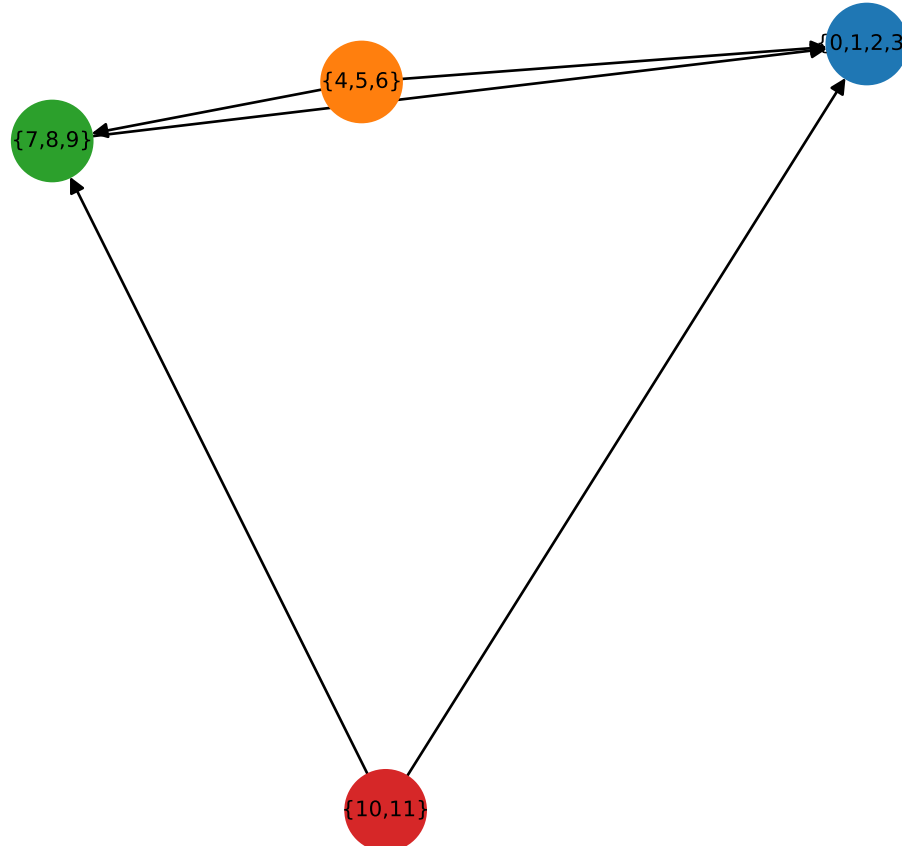

OICA estimate (8,000 obs. samples)
[Tarjan's on ICA support → 3 blocks found]

True DG — n=12 (SCCs of size 4,3,3,2)
4 non-trivial SCCs

True condensation (ground truth)
[Tarjan's on true graph → 4 blocks]

OICA estimate (20,000 obs. samples)
[Tarjan's on ICA support → 4 blocks found]
